

Natural Health Tips

Splenda

Citizens for Health, the national grassroots advocacy organization committed to protecting and expanding natural health choices, submitted a Citizen Petition to the U.S. Food & Drug Administration (FDA) calling on the agency to revoke its approval of sucralose, better known as the artificial additive, Splenda. Sucralose is a highly processed chemical sweetener manufactured with chlorine in a factory in McIntosh, Alabama, in a process that releases such toxins into the environment as cyclohexane.

“There were potential public health concerns regarding sucralose that were dismissed by the FDA when they first approved this synthetic additive,” said Jim Turner, Esq. chairman of the board of Citizens for Health. “People should also know, however, that there has not been a single human clinical study on the finished product, Splenda.”
